

# Forex Lady Robot

**v1.24**

## User's Guide

by Rita Lasker

## Introduction

We wanted and we've finally created a product with an algorithm that's NOT affected by negative factors.

To paraphrase it in a respectful, though slightly humorous way, this is akin to a "female logic": to assess, estimate and respond - but NOT to the immediate factors, but rather to the "time-tested values", while making intuitive decisions based on the information available.

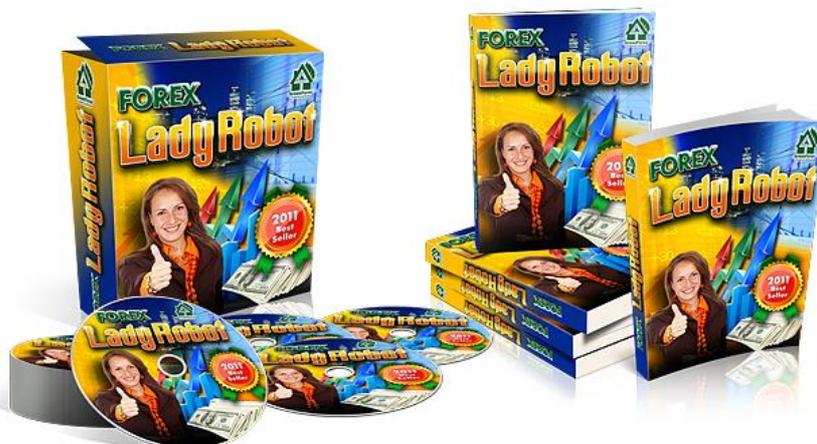

That's right - you hear it correctly: through a cold and impersonal digital lingo of 1's and 0's, we've managed to recreate a concept of a "female intuition" - namely, being able to predict a situation. And that is a major staple of our product!

### **IMPORTANT NOTE on the proper trading:**

Forex Lady Robot is developed for MetaTrader 4 only.

Please consider that it has the unique self-educating algorithm and **IT IS EXTREMELY IMPORTANT to provide a stable Internet connection** while it is running. Don't close MT4 - please leave it running at all times.

Sometimes, depending on a market, it trades seldom.

**Yours,  
Rita Lasker & Green Forex Group.**

# Installation and Setup

## Step 1.

If you have MetaTrader 4, please check what your build is. If you run previous versions you may experience problems with installation. To learn about latest available build please contact your broker support.

\*If you do not have MetaTrader 4 installed, you need to download it from a Forex broker web site. Choose only a broker with a good reputation. Many forums have entire sections exclusively dedicated to brokers. There you can learn about all the 'pluses' and 'minuses' of each broker. We recommend using only well known, reputable brokers that have been on the mark for a long time, such as:

<http://fxpro.com>

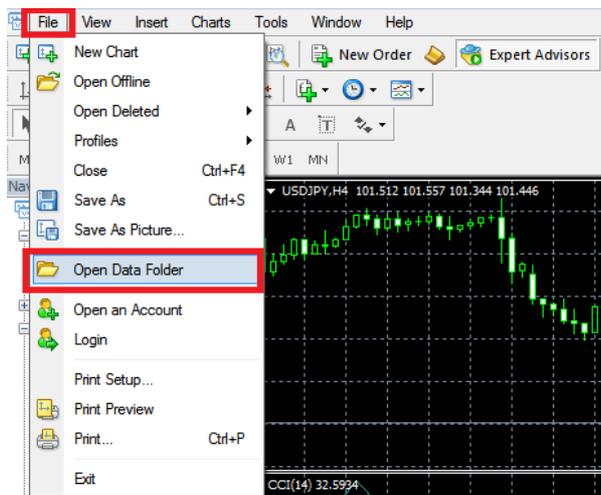

<http://alpari.co.uk>

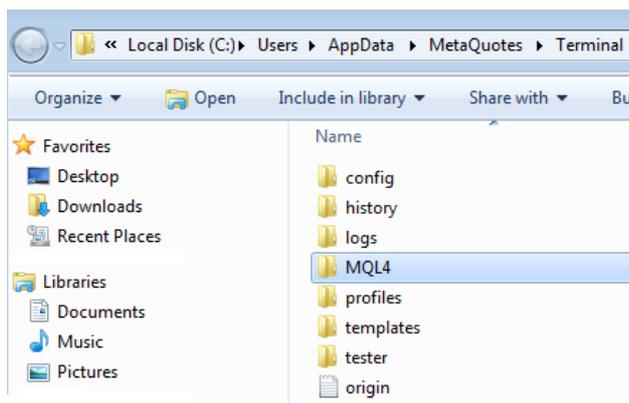

Follow the links above, choose your Forex broker, and download MetaTrader 4 for free. After you download MetaTrader 4, install it on your computer. This is a standard and simple operation. Open demo account for a start.

## Step 2.

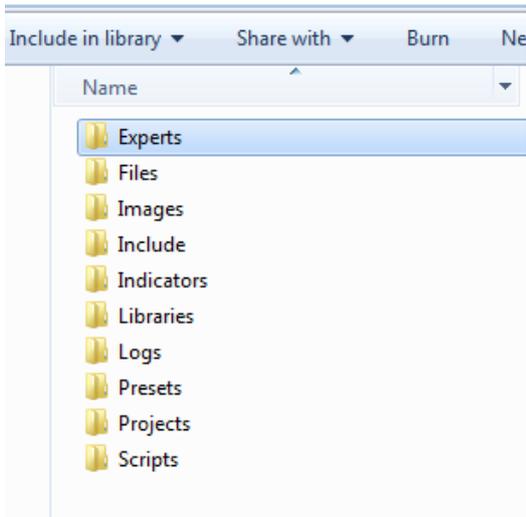

Start MetaTrader4. Select **File** in the menu, **Open Data Folder**.

A new window will open and you will see a special MT4 folder: its name may vary depending on your broker. Now, open **MQL4** folder.

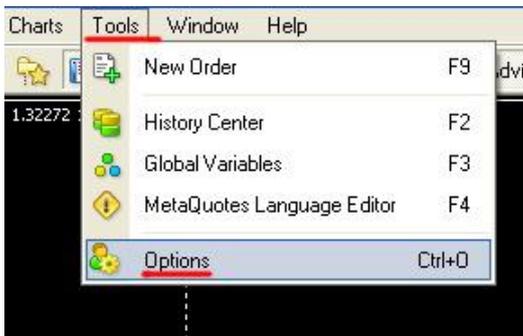

Here you will find an **Experts** folder:

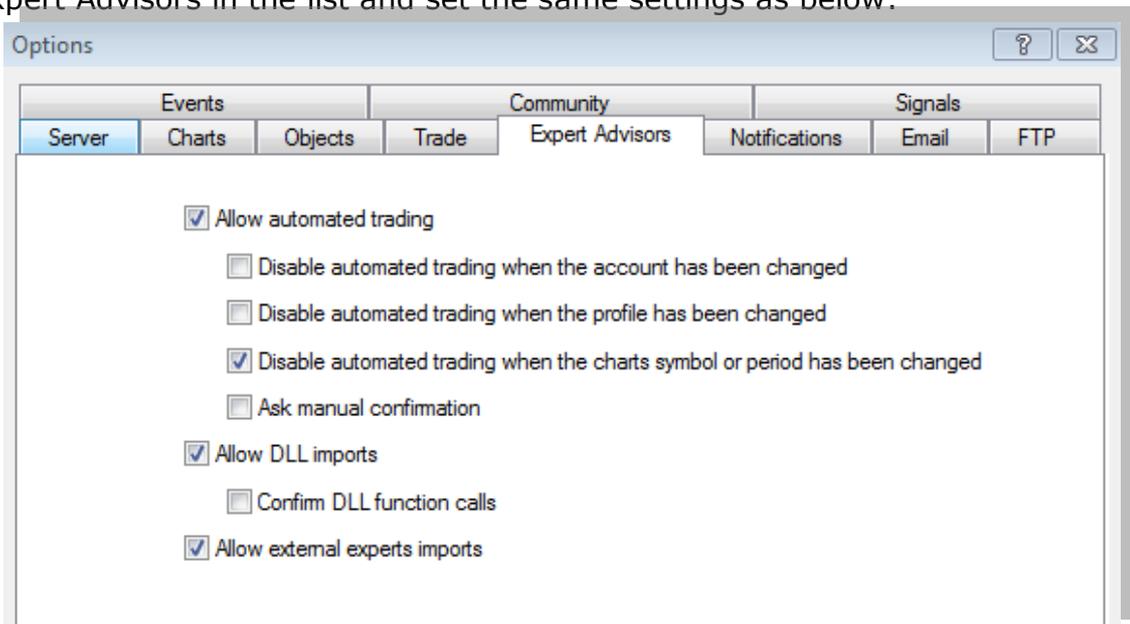

Copy and paste robot ex.4 file inside **Experts**. Now RESTART MetaTrader4. The file will appear under Navigator list. But before the setup, please check Live trading.

### **Step 3. Check Live Trading settings**

Start MetaTrader4. For the proper live robot trading you need to check the following Options. Go to Tools in the main menu of MetaTrader4.

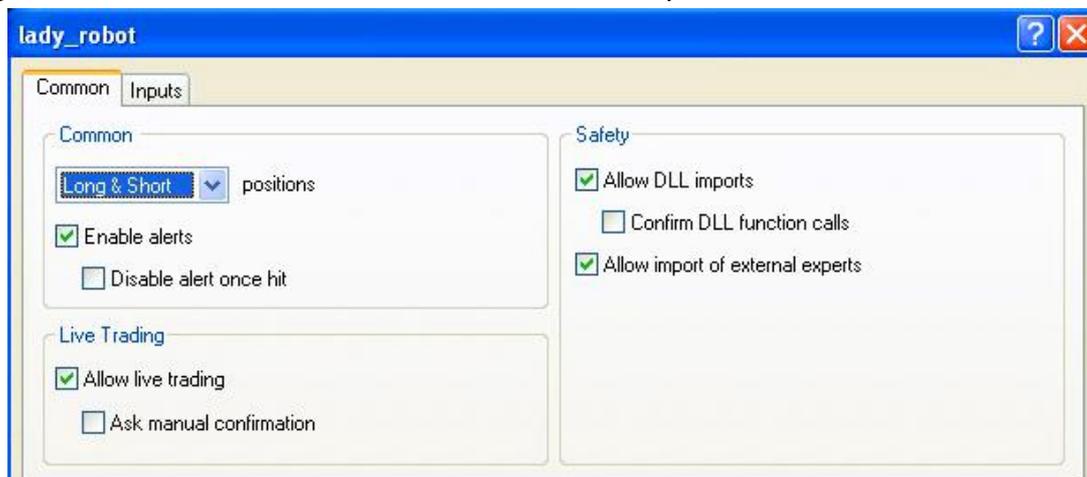

Find Expert Advisors in the list and set the same settings as below:

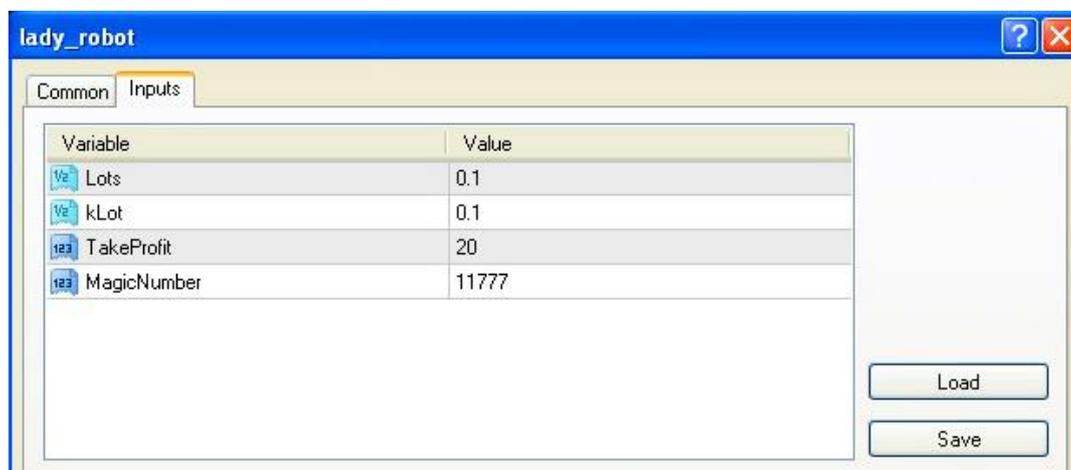

Press OK.

**Step 4.** Open the following chart in MT4: **EURUSD, H1**

Drag and drop **lady\_robot** from Navigator panel to the chart. Please, make all the settings in the "**Common**" tab the same as in the picture below.

In the "Inputs" tab, you'll find the variable parameters of the robot:

**\*This is an example of the Inputs tab. The settings in this tab may be different.**

**Lots** - Initial order volume. Lot Size.

**kLot** - Lot Size of the adjustment order after the loss.

If Initial order closes with a little loss shortly after the opening - sometimes algorithm fails to catch the market impulse correctly - the second adjustment order opens in the "opposite direction" using this Lot. We recommend **same values** for Lots and kLot.

**TakeProfit** - Take profit

**Magic** - the unique number of the robot

Click **OK**

**Step 5**

In the top right corner of the terminal window you will see the name of the robot with a smiley. If there is a cross next to it, please get back to the step 4.

Please do not install it on other pairs and timeframes, use only the recommended.

**Make sure that you enabled stable Internet connection and do not shut down or hibernate your PC. It WILL affect its trading.**

**Great.** You have successfully installed, set up, and launched the robot. Now it will trade, open and close order automatically and completely independently without any intervention on your part. You can watch the results of its work in the computer screen.

The bottom part of the window displays the trading and their results in two tabs: Trade and Account History.

If you do not see the tabs, press CTRL+T on the keyboard to display the trading window. We strictly recommend you to activate the "Comments" field in the "Trade" and "Account History". It will help you to define which robot is placing orders now.

**Good luck with your trading!**

If you have any questions, please feel free to ask our support team by sending an E-mail to: [support@ritalasker.com](mailto:support@ritalasker.com)  
We will do our best to help you.
