

Forex 3D Robot

User's Guide

by Rita Lasker

2014

Introduction

I am Rita Lasker, the Head of Green Forex Group with my team of programmers and professional currency market traders.

We decided to focus on 3 main directions of Forex. It should be simple for experts, intuitive for novices and what is the most important – profitable. At least, there should be no losses.

How to solve it and make a product suitable for all traders and any market? Hard task that we seemed to accomplish with great results. Let me offer you our Forex 3D Robot.

**Yours,
Rita Lasker & Green Forex Group.**

IMPORTANT NOTE

We allow using any of our products **on 1 live account only**. Demo accounts are not limited provided they are installed on your personal PC.

How the security system works

This software is protected by authors patented algorithm which eliminates the code partially at the attempt to decompile. Software cracking leads to its unprofitable performance. Henceforward all pirate copies function absolutely incorrectly.

Installation and Setup

Step 0. How to reinstall it (if new version or update is available).

In case your version has expired or/and you received a newer one, you will need to reinstall the product properly. For this, please close the chart with the installed product (all charts with it). Go into your broker folder via **MetaTrader – File – Open Data Folder> MQL4 >Experts**

Find old files of robot.ex4 and DELETE them. Restart MT4. Make sure that it is not listed in Navigator now. Go back into Experts folder and copy new ex.4 files of Robot. Restart Mt4. Now you will do the same procedure of its setup as during the first time installation. So please refer below.

First-time installation and Setup

Step 1.

If you have MetaTrader 4, please check what your build is. If you run previous versions you may experience problems with installation. To learn about latest available build please contact your broker support.

*If you do not have MetaTrader 4 installed, you need to download it from a Forex broker web site. Choose only a broker with a good reputation. Many forums have entire sections exclusively dedicated to brokers. There you can learn about all the 'pluses' and 'minuses' of each broker. We recommend using only well known, reputable brokers that have been on the mark for a long time, such as:

<http://fxpro.com>

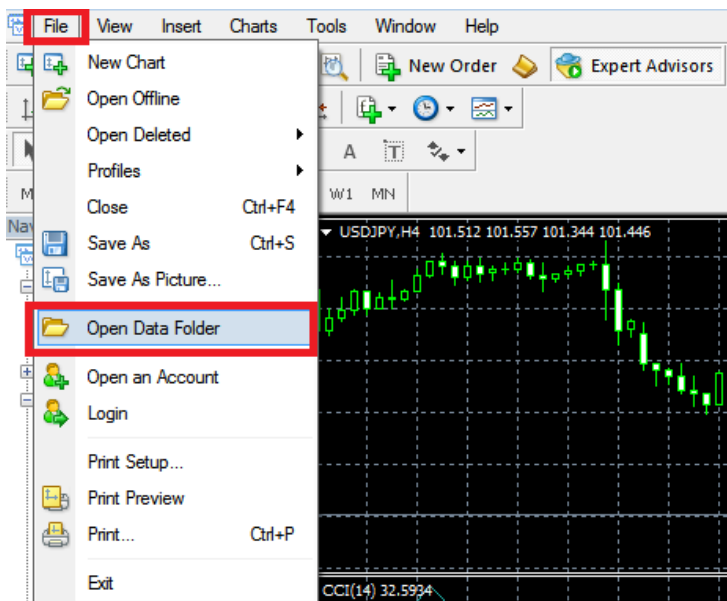

<http://alpari.co.uk>

Follow the links above, choose your Forex broker, and download MetaTrader 4 for free. After you download MetaTrader 4, install it on your computer. This is a standard and simple operation. Open demo account for a start.

Step 2.

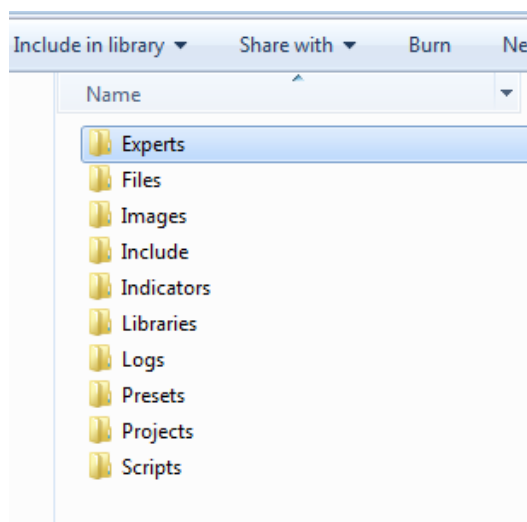

Start MetaTrader4. Select **File** in the menu, **Open Data Folder**.

A new window will open and you will see a special MT4 folder: its name may vary depending on your broker.

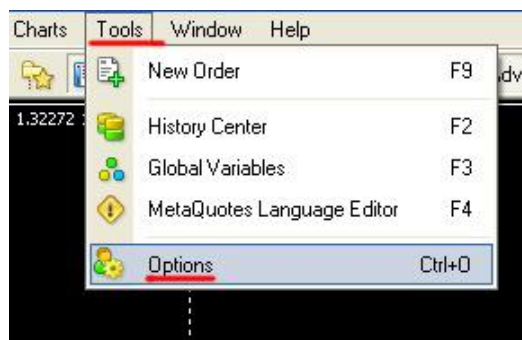

Now, open **MQL4** folder. Here you will find an **Experts** folder:

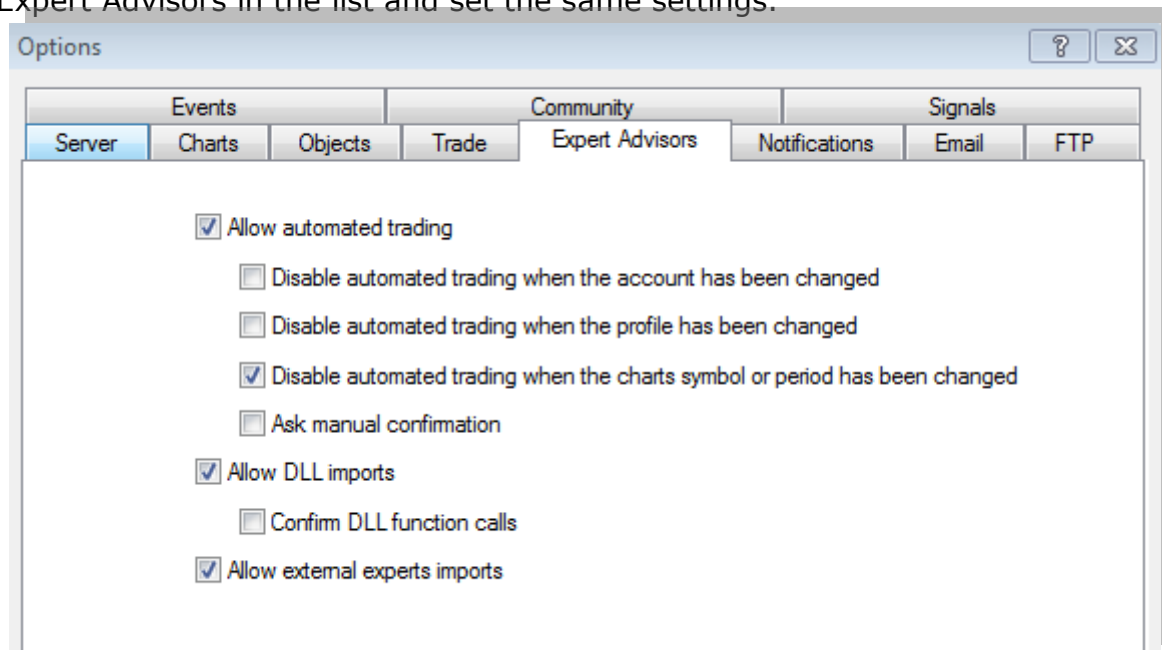

Copy and paste robot ex.4 files inside **Experts**. Now RESTART MetaTrader4. The files will appear under Navigator list. But before the setup, please check Live trading.

Step 3. Check Live Trading settings

Start MetaTrader4. For the proper live robot trading you need to check the following Options. Go to Tools in the main menu of MetaTrader4.

Find Expert Advisors in the list and set the same settings.

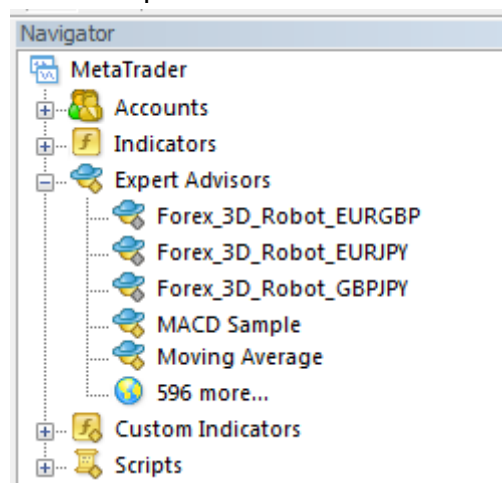

Press OK.

Step 4. Take a look at Navigator panel on the left of the main window.

The Navigator panel displays all the accounts, indicators, expert advisors, custom indicators, and scripts available to you. Let's focus on Expert Advisors for now.

If you followed the simple instruction above, you should see under Expert Advisors.

If you don't see it there, please make sure you placed ex.4 files in the correct folder, as described above. **Relaunch MetaTrader 4 and check Expert Advisors again. IF FILES ARE STILL NOT LISTED THERE**, get back to Experts folder – it may happen that ex.4 files are not there (just disappeared), do not worry and copy the files again.

1. Copy the files into Experts folder of your broker – **Open it via MT4 – Open Data Folder button. It is important!**
2. Close MetaTrader4 and Start it again.
3. Check Navigator. If they are not here, repeat the steps 1-3 again few times.

If it doesn't help, contact our technical support by sending an email to:

support@ritalasker.com

Step 5. Open the following charts in MT4:

EURGBP, M30 for **Forex_3D_Robot_EURGBP**

EURJPY, M30 for **Forex_3D_Robot_EURJPY**

GBPJPY, M30 for **Forex_3D_Robot_GBPJPY**

It is developed only for M30, EURGBP, EURJPY and GBPJPY.

Drag and drop **Forex_3D_Robot_EURGBP** from the Navigator panel to **EURGBP, M30**. A window with the Robot settings appears. Please, make all the settings in the **“Common”** tab the same as below.

The screenshot shows the 'Common' tab of the robot settings window. It contains three sections: 'Common', 'Live Trading', and 'Safety'. In the 'Common' section, the 'Long & Short' dropdown is set to 'Long & Short' and 'positions' is selected. 'Enable alerts' is checked, and 'Disable alert once hit' is unchecked. In the 'Live Trading' section, 'Allow live trading' is checked, and 'Ask manual confirmation' is unchecked. In the 'Safety' section, 'Allow DLL imports' and 'Allow import of external experts' are checked, while 'Confirm DLL function calls' is unchecked.

Section	Setting	Value
Common	Long & Short	Long & Short
	positions	positions
	Enable alerts	checked
Live Trading	Allow live trading	checked
	Ask manual confirmation	unchecked
Safety	Allow DLL imports	checked
	Confirm DLL function calls	unchecked
	Allow import of external experts	checked

In the **“Inputs”** tab, you’ll find the next parameters of the robot:

The screenshot shows the 'Inputs' tab of the robot settings window. It contains a table of variables and their values. To the right of the table are 'Load' and 'Save' buttons.

Variable	Value
MagicNumber	1232536
Start Time	0
EndTime	23
RiskFriDay	true
Lot	0.1
UseAutoLot	0
dLotsPercent	10.0
TakeProfit	40
StopLoss	60
MaxOpenOrders	3
Hedging	false
SL_Fix	13
SL_Delta	8
SL_Step	0.1
SL_Stealth	false
SL_Breakeven	true
MaxPriceTrading	0.0
MinPriceTrading	0.0

Buttons: Load, Save

- **Please note that we trade with these default settings. With fixed Lot Size and enabled Breakeven.**

Magic: the unique number of robot, if you change it, make sure that all the robots have DIFFERENT Magic Numbers.

StartTime: GMT time when robot starts monitoring the market and may place orders.

EndTime: GMT time when robot ends monitoring the market and stop placing orders. Default values are set for constant trading during the whole day.

RiskFriDay: select true to enable Friday trading, and false to disable it.

Lot: Lot Size. Please start with the smallest.

useAutoLot: Type of your Money Management system (MM)

0 – select it to disable Money Management and use a Fixed Lot Size set in "Lot" above

Select here the TYPE of risk if you want to activate MM: **1** or **2** or **3**

1 – **risk**, in % from Total Equity

2 – **risk**, in % from Free Margin

3 – **risk**, in % from Balance

dLotsPercent: risk, in %. Decide what amount to risk. Be careful here! If you want to use a MM and selected its type above (1-2-3), set its risk value here in %.

**if you set 0 in useAutoLot, Robot will ignore this value and use fixed Lot.*

For example, you select:

useAutoLot – 3 (risk from your Balance)

dLotsPercent - 10

10% of your deposit may be risked. Robot will calculate Lot Size taking this risk and your deposit following the formula: $\text{Deposit} * \text{dLotPercent} / 100000$.

TakeProfit: fixed take profit value of the order

StopLoss: initial stop loss value of the order

MaxOpenOrders: the maximum number of simultaneous orders on this currency pair

Hedging: select "true" to allow it, "false" to forbid it.

Trailing system: Sensitive or Breakeven

You have 2 different variants of trailing available:
sensitive constant trailing or just a single breakeven.

SL_Breakeven: true or false.

If you set SL_Breakeven as true, the robot will set initial SL and TP and when it is available it will move SL to breakeven. No trailing after this.

If you set SL_Breakeven as false, the robot will trail Stop Loss after the price according with the following settings:

SL_Fix: your minimum desired value of profit in pips to be fixed when trailing begins.

SL_DELTA: it is a trailing distance between a price and Stop Loss when trailing is activated.

SL_Step is a trailing step. The smaller it is, the most sensitive trailing is. But, if you notice **Errors in Modifying SL** (check logs for that), increase the value to about 3-5.

SL_Stealth: true or false. Stealth mode allows you to hide Stop Loss from a broker.

See the example with SL_FX as 13, SL_Delta as 8

Stop Loss Trailing is activated when certain profit is reached. You may adjust it. The point when Trailing is activated is $SL_Fix + SL_DELTA$ parameters

If a profit reaches +21 pips ($SL_FX\ 13 + SL_Delta\ 8$), SL is moved to the new level of 13 pips of profit (SL_Fix) and starts trailing it with the most sensitive trailing step as small as 0.1 pip at the distance of 8 pips (SL_Delta).

Red Channel Safety system

Most often we get emails from you about news impact and how to avoid losses due to the sudden price jumping. We offer our unique Red Channel safety system. It allows you to set two levels above and below the actual price to indicate that "zones" of the chart where trading is not allowed. If a price crosses that line, no trades will be open by a robot.

MaxPriceTrading: it is the upper level of Red Channel system, no orders would be placed above this line. Enter the level you need.

MinPriceTrading: it is the lower level of Red Channel system, no orders would be placed below this line. Enter the level you need.

More about Red Channel system.

It's not a fully automated protection yet, you still need to know when serious impact is expected. Nevertheless, if you don't follow news you will still like this system. You may use previous day's high/lows or support/resistance levels as a guide in case you wish to prohibit robotic trading above and below a certain price level. You need to set up these levels manually.

Click **OK**

Drag and drop other robots to the relevant charts in the same way. Default values may be different, but description is the same.

Step 6. Check Live Trading and other settings for AUTO trading.

Check Auto Trading in the toolbar. It should be with the green triangle.

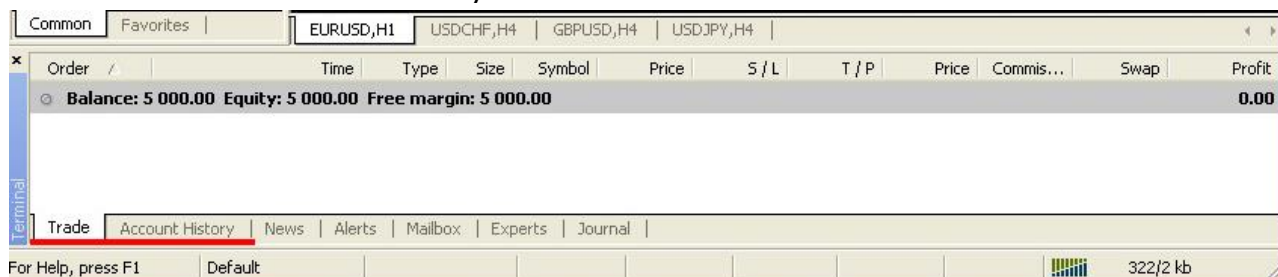

At the same time, in the top right corner of the terminal window you should see the name of the robot with a smile.

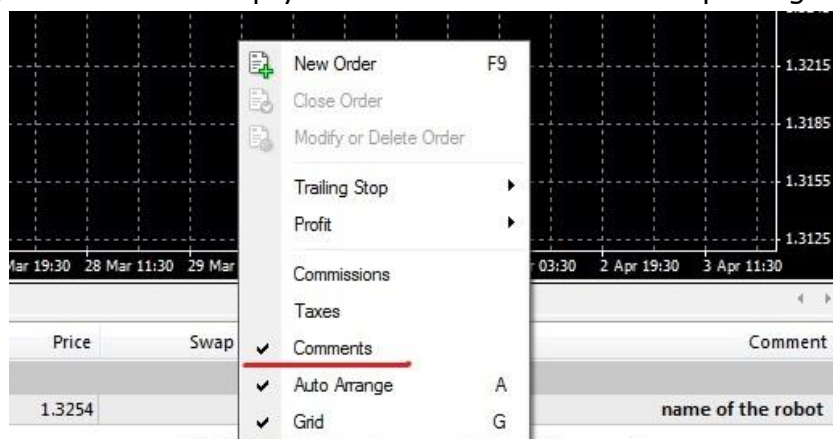

If there is a cross next to it, it indicates that your robot has been activated but your terminal does not allow algorithmic (robot) trading. That means that you have not followed **Step 3**. Please get back to it.

**In case your Robot expired (newest version may be is available)
please contact us with **Order Number**.**

Great. You have successfully installed, set up, and launched the robot. Now it will trade, open and close order automatically and completely independently without any intervention on your part. You can watch the results of its work in the computer screen. The bottom part of the window displays the trading and their results in two tabs: Trade and Account History.

If you do not see the tabs, press CTRL+T on the keyboard to display the trading window. We strictly recommend you to activate “**Comments**” field in “Trade” and “Account History” tabs. It will help you to define which robot is placing orders now.

(right click on empty space to see this menu)

Please note this version of our robot will be named according with its MAGIC number in Comments. If few days pass and no trades happen, check that your account is active and there are no errors in Experts and Journal tabs. Check that you install it on M30 and MT4 is running at all times.

Just a reminder – we allow to use any of our products **on 1 live account only**. Demo accounts are not limited provided they are installed on your personal PC.

Interested in more than 1 live account?

1 copy of any our product may be installed on 1 live account only. If you would like to use it on other accounts you may get the additional license for the each of them.

50% OFF

Please contact support by email and we will be happy to provide you with a superb 50% OFF discount (only via PayPal).

Good luck with your trading!

If you have any questions, please feel free to ask our support team by sending an E-mail to: support@ritalasker.com
We will do our best to help you.

Yours,

Rita Lasker & Green Forex Group.
