

The Xtreme Squeeze - Histogram

This is the main indicator, where all the magic happens.

The Xtreme Squeeze Histogram shows “peaks and valleys” and provides extremely easy to understand signals. It “senses” what the market is going to do, often before it happens. The Histogram is so powerful, you could almost trade without looking at the candlesticks!

Here’s what it looks like...

The Histogram allows you to **see into the future and predict when a trend will turn** before it happens!

The Xtreme Squeeze - Bias Line

Within Xtreme Squeeze I’ve **hard-coded in a surprising powerful new indicator**. It’s called the Xtreme Squeeze Bias line and it will revolutionize how you trade.

The Bias Line uses a sophisticated statistical algorithm that took years of development.

This is the heart of the system and is unlike anything you have ever seen before in terms of accuracy and ease of use.

Once you have used the Histogram and Bias Line combination in the Xtreme Squeeze, you will never want to trade without them.

“Our Squeeze worked great before we had this line.

*But our **win rate skyrocketed** after we incorporated the Bias Line.”*

Xtreme Direction

Some traders love their candlestick charts. You might be one of them! So, I’ve created an indicator overlay (known as a “Paint Bar Study”) that **makes detecting market direction changes a snap.**

Here’s a snapshot of Xtreme Direction in action...

Notice the yellow bars? They often appear at turning points and plot reversals in **real time**.

Like all of our indicators, they never repaint.

This early-warning system allows you to enter the market with minimal risk and maximizes your profits.

Many traders have told us that the Xtreme Direction **takes the guess work out of establishing market swings** – they just follow the yellow bars.

But that's not all...

Xtreme 2EMA

The Xtreme 2EMAs are used not only for showing the trend.

Most importantly, they are used as dynamic support:

or resistance areas.

Look at any time frame, the price often pulls back to the EMAs and bounces in a trending market.

When the price breaks above or below the EMAs from the other side, often it would want to re-test the EMAs levels before continuing its way.

Xtreme FMA

This moving average follows the price very closely. It works on the same principle as the other system components: **Fast, yet smooth.**

I like to use this moving average, together with the Xtreme Direction, to form “triggers” for me. I will enter a long position when a yellow or blue candle closes above the FMA, or short on the yellow or red candle closes below the FMA.

This often allows me to **enter right at the turning point** of the market.

Xtreme Scalper Dots

My Xtreme Scalper Dots is a powerful tool that shows market structure and price action at a glance.

It shows highs, higher highs, lows, or lower lows, so I always know where the previous swing high/low is at.

They are also great for drawing trend lines – just connect the dots!

The Scalper Dots also tell me where to put my stoploss and where my first target might be based on previous swing high and low. If a strong trend develops, I often trail the stop with the Scalper Dots.

Xtreme iTunnel

The Xtreme iTunnel adds another layer between the 2EMAs and the FMAs.

The main benefits are...

Sometimes the price won't pull back all the way to the EAMs in strong trend market.

In this case the iTunnel serves as another layer of support or resistance. Price might pull back inside the iTunnel and bounce, so we can add to our position there.

The iTunnel can also be used as a dynamic trailing stop. We can set our hard stoploss initially with the Scalper Dots, then trail with the “outer” line of the iTunnel once we are in profit.

After we have build up certain profits, we can tighten the stop to go with the inner line of the iTunnel.

When the iTunnel is flat, when the EMAs or even the FMAs are coming together and very close or even inside the iTunnel, there is no trend, so stay away.

Xtreme Trend Bars

Everyone knows the trend is our friend, go with the trend is always safer and usually more profitable.

The Xtreme Trend Bars plot the short term, midterm and long term trend, which means you don't need to keep flicking through your charts.

When a trend develops, you will be able to take signals from a shorter term indicator in the direction of a longer term direction very easily.

Xtreme OSOB

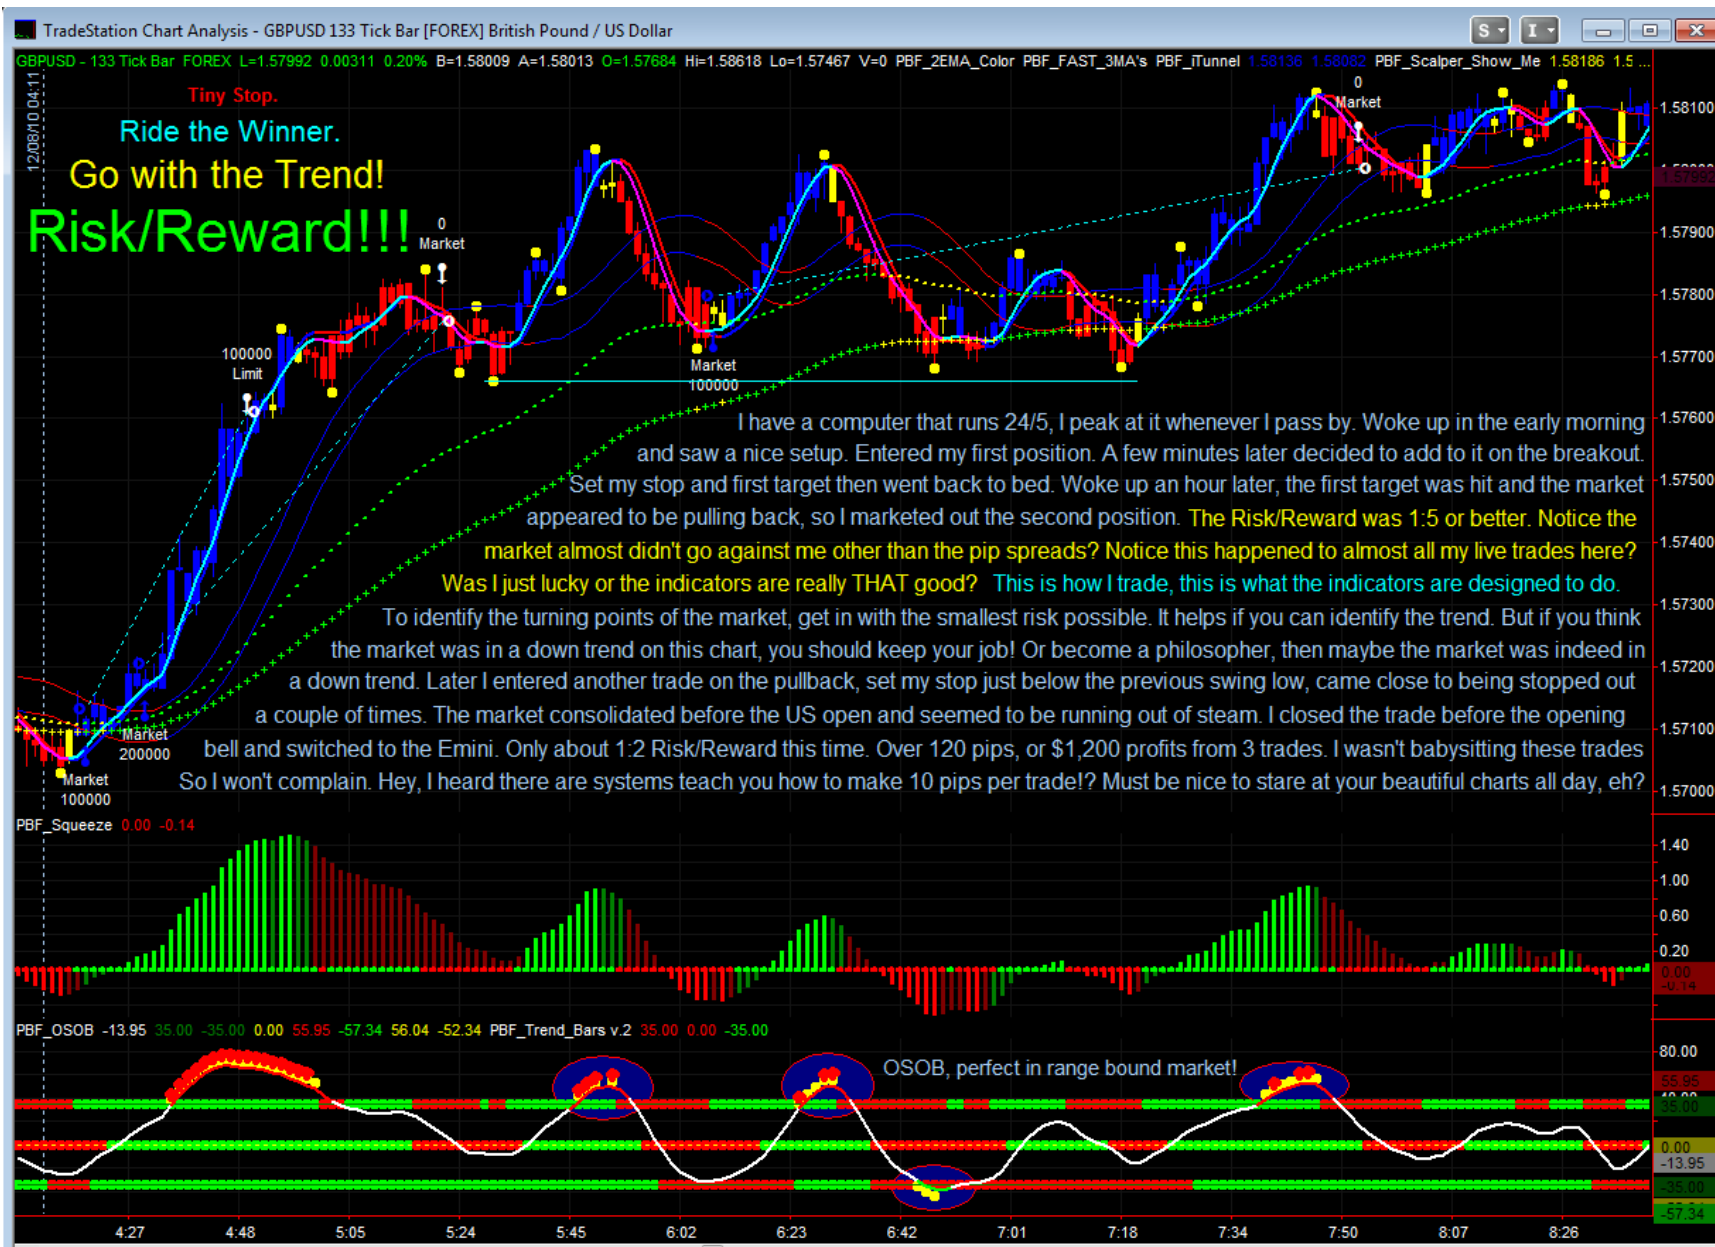

The Xtreme OSOB (Over-Sold/Over-Bought) works wonders in **picking tops and bottoms** in a non-trending, range bounding market.

In a trending market, I like to use the OSOB to take partial profits, or scale out then scale in.

Getting Started with the Xtreme Squeeze
Couldn't be Any Easier

Will the system work when the market is very slow and the volume is very low, such as overnight trading? Sure!

Look at this over night chart, simply beautiful! Note once again how small your stops are, as the signals are always generated near the market's turning points. Absolutely excellent Risk/Reward Ratio! 4 setups, 4 winners. It is really not very easy to find a loser on our charts!

Fast + Smooth = Low Risk + Great R/R

The Formula of Making Money in Trading:

1. Wins more often than Loses.
2. Big Wins, Small Losses.

This is what our System is designed to do.
